

## PRESS RELEASE

### **Eberspaecher heating and cooling solutions for motorhomes: Always the right temperature on the road**

- New, smart control app makes heater operation even more flexible
- Comfortably warm with air or water heating
- Pleasantly cool with portable air-conditioning unit

*Esslingen, 27 August 2016* – Independent and individual – from 27 August to 4 September 2016, thermal management specialist Eberspaecher will present customized heating and cooling systems at the Caravan Salon Duesseldorf. With the new EasyStart Web pre-heaters can be conveniently operated, regardless of range, with the smartphone app or via the internet browser – allowing the most possible flexibility for leisure time planning.

When the weather shows its most changeable mood and surprises us with rain, snow or a sudden cold snap, motorhome drivers can look forward to returning to a toasty warm living room. The new Eberspaecher **EasyStart Web** makes it possible to control the pre-heater, with sufficient network coverage, from anywhere in the world via the smartphone app. This allows tourists on long hikes or winter sport trips to use the heating control element to spontaneously set the temperature without the need to return to their motorhome.

Whether a compact van or spacious luxury motorhome: The Eberspaecher **Airtronic** air heater series offers the perfect solution for the short-term heating of the interior. After a day on the slopes, it heats the driver's cab quickly, economically and extremely quietly and is an ideal way to maintain a constant comfortable temperature at night. For mountain vacations in areas between 1,400 and 3,500 meters, the

addition of an **altitude kit** is recommended: it ensures uniform combustion through the correct diesel-air mixture ratio. **Oxikat**, specially developed for motorhomes, ensures exhaust odors and the emission of pollutants are reduced to a minimum.

Those who frequently holiday in winter locations are excellently equipped with the Eberspaecher **Hydronic** water heater series. It warms the interior to comfortable temperatures and, in conjunction with a boiler, heats service water for the kitchen or a warm shower. Alternatively, the water heater can be integrated into the engine cooling system to preheat the engine and also free the windows of snow and ice with the driver's cab heating. The Hydronic scores points in frosty winter weather: It provides for increased road safety thanks to good all-round visibility as well as a positive ecological balance by reducing emissions when warm starting.

In the summer heat, on the other hand, **Ebercool** evaporation cooling systems always ensure a cool breeze on the road: the 12 V cooling system with its very low energy and water consumption is particularly suitable for motorhomes, as they are not dependent on a fixed power source. The **Ebercool Holiday III** offers maximum independence: the particularly environmentally-friendly, water-based pre-cooling system works independently of the engine with very low power consumption and is also very quiet. For maximum flexibility, the **Ebercool Portable**: the portable evaporation cooler can be placed in the motorhome exactly where comfortable cooling is desired. Thanks to the 12 V plug or the supplied 230 V adapter it can also be used outside the vehicle.
