Caravan Salon 2022: Comfortable and self-sufficient on the road with Eberspaecher camper solutions

- **Camp with greater self-sufficiency thanks to Xellstor energy management systems**
- **Airtronic 3 in all performance classes from 2 to 8 kW**
- **Silencio heat exchanger family for optimized heat distribution**

Esslingen (Germany), 13. June 2022 – In addition to comfort, self-sufficiency is becoming ever more important for camping enthusiasts. From August 26 to September 4, 2022, thermal management specialist Eberspaecher will be presenting its products at the Caravan Salon 2022 in Hall 13, Stand B11. The portfolio not only includes products that provide pleasant temperatures within the four walls on wheels, but also autonomous power supply systems: The energy management systems of the Eberspaecher Xellstor product family can supply power to the camper vehicle itself or also to additional consumers, independent of the vehicle battery.

To meet the growing demand of campers for greater independence of external power supplies, Eberspaecher has developed the **Xellstor energy management systems**. This represents a move by the Esslingen-based company to expand on its previous well-known heating and cooling product portfolio. At the Caravan Salon 2022, Eberspaecher will present autonomous power supply solutions for recreational vehicles and additional consumers. The accompanying app allows the user to monitor the current battery status at all times.

Airtronic 3 provides heat in all types of recreational vehicles

More and more campers are keen to use their vehicles even in the colder seasons. Eberspaecher's air heaters are engine-independent and keep the vehicle pleasantly warm even on colder nights or when the outdoor temperature is low. The **third generation of Eberspaecher's air heater Airtronic** combines state-of-the-art technology with proven functions for fast cab heating. Longer heating times are not a problem thanks to further-optimized power consumption, while the Airtronic's extremely quiet operation also continues to impress thanks to the stepless heat output control and acoustically optimized metering pump technology. For journeys in mountainous regions, the Airtronic 3 features an integrated automatic altitude adjustment that enables automatic adaptation at altitudes of up to 5,500 meters, depending on the version. Four model variants in a total of twelve versions (2 to 8 kW) of the Airtronic 3 take care of all types and requirements of recreational vehicle. The 2 kW and 4 kW variants are both available in Diesel and gasoline versions.

Heat exchanger portfolio for all performance classes

To enable rapid, optimal distribution of heat from water heater units, Eberspaecher offers a broad range of heat exchanger models and performance classes to manufacturers. The **Silencio water heat exchanger product family** is available in three versions with different numbers of blowers and heating capacities from 1.5 to 4 kW. Each model can be integrated individually into the RV to suit the application requirement.

About Eberspaecher:

With approximately 10,000 employees at 80 locations worldwide, the Eberspaecher Group is one of the automotive industry's leading system developers and suppliers. The family business, headquartered in Esslingen am Neckar, stands for innovative solutions in exhaust technology, automotive electronics and thermal management for a broad range of vehicle types. In combustion or hybrid engines and in e-mobility, the components and systems from Eberspaecher ensure greater comfort, higher safety and a clean environment. Eberspaecher is paving the way for future technologies such as mobile and stationary fuel cell applications, synthetic fuels as well as the use of hydrogen as an energy carrier. In 2020, the Group generated revenue of more than 4.9 billion euros.
