Caravan Salon 2023: Eberspaecher camper solutions for year-round comfort

- **New Breezonic air-conditioning system with heat pump in two performance classes**
- **Heating and cooling solutions in electric and classic recreational vehicles**
- **Proven product families of air and water heaters**

Esslingen (Germany), 25 August, 2023 – **Being close to nature without compromising on comfort is what many camping enthusiasts are after. Thermal management specialist Eberspaecher will be showcasing products for pleasant room temperatures within mobile homes: From 25 August to 3 September, visitors to Booth B11 in Hall 13 will find heating and cooling solutions for electric and classic recreational vehicles.**

The new **E-Airtronic EHV1 230V** ensures pleasant temperatures in colder seasons. The electric air heater with 1 kW of heat output and a blower enables targeted heat distribution in RVs with a battery-powered drive. The PTC technology used by Eberspaecher guarantees high intrinsic safety against overheating and ensures reliable heater operation capacities. The E-Airtronic EHV1 230V also impresses with its extremely quiet operation. For the summer and transitional seasons, Eberspaecher presents another new product by way of the **Breezonic** family. The rooftop air conditioner with heat pump function combines cooling and efficient heating as needed via reverse circulation. The system convinces with compact dimensions, low weight and maximum power efficiency. The R32 refrigerant used for operation is far more environmentally friendly than the more common R410A. In the future, the product family will include two versions in power classes of 2.5

and 3.5 kW for individual comfort requirements. The Breezonic can be operated via an app.

Air and water heaters for all power classes

In addition, Eberspaecher will be exhibiting its proven product families of air and water heaters while on site. The third generation of the **Airtronic** offers quickly available heat with optimized current consumption in all power classes from 2 to 8 kW. With the **Hydronic**, Eberspaecher enables a particularly high heat output of up to 12 kW in larger RVs. EasyStart Pro, as an intelligent permanently installed operating element, and the Internet-based EasyStart Web control system ensure straightforward operation via app or browser. Both control units are compatible with the Airtronic and Hydronic families.
