Cool and Comfortable through the Summer of Camping

- **Eberspaecher Breezonic air conditioning system for retrofitting**
- **Quiet nights thanks to low-noise operation**
- **Inverter technology achieves low energy consumption**

Esslingen (Germany), 2 May, 2024 – **The coming summer months are peak season for camping vacations, but warm nights often keep travelers awake. Auxiliary air conditioning systems from Eberspaecher allow you to relax in caravans and recreational vehicles all year round. User-friendly operating elements – from app to touch panel – allow flexible control.**

When the summer sun is beating down outside, the new **Breezonic** product family from Eberspaecher provides the much-desired cooling in the internal space. Its particularly quiet operation and the additional night mode guarantee restful sleep. The touch panel integrated in the air distribution box allows operation directly on the unit. In addition, the roof-mounted air conditioning system can be flexibly controlled with an optional infrared remote control and associated app via Bluetooth. The function for dehumidifying the internal space reduces the air humidity and creates a pleasant room climate. This allows vacationers to enjoy nature in comfort.

Heat pump and inverter technology

The powerful Breezonic not only offers optimum temperatures in summer. By reversing the cycle, the heat pump enables cooling or heating as required. It provides cozy warmth on rainy days. With inverter technology, the speed-controlled compressor achieves particularly quiet operation and low energy consumption. An Eco mode is available for particularly energy-saving use. Its gentle start-up prevents high power spikes and

overloading of the power grid. Eberspaecher has opted for the R32 refrigerant to operate the system, which is becoming increasingly popular in Europe. The product family will be available from August.

Two versions for individual requirements

Eberspaecher meets different comfort requirements with different model versions. The **Breezonic Performance Plus** is currently one of the most powerful systems on the market with a cooling output of 3.6 kW and a heat output of 3.5 kW. This makes it particularly suitable for large internal spaces and high performance requirements. For medium-sized vehicles, the **Breezonic Performance** has a cooling output of 2.5 kW and a heat output of 2.4 kW. The flat design with an overall height of just 25 cm is ideal for retrofitting to a large number of campers and recreational vehicles. Eberspaecher plans to extend the product family to include further models in the future.

About Eberspaecher:

With approximately 10,700 employees at 80 locations worldwide, the Eberspaecher Group is one of the automotive industry's leading system developers and suppliers. The family business, headquartered in Esslingen am Neckar, stands for innovative solutions in exhaust technology, automotive electronics and thermal management for a broad range of vehicle types. In combustion or hybrid engines and in e-mobility, the components and systems from Eberspaecher ensure greater comfort, higher safety and a clean environment. Eberspaecher is paving the way for future technologies such as mobile and stationary fuel cell applications, synthetic fuels as well as the use of hydrogen as an energy carrier. In 2022, the Group generated revenue of around 6.4 billion euros. Net revenue adjusted for transitory items amounted to 2.7 billion euros.
